Methodology

Online Survey

6 minutes

2,300 General
Public Age 16+

The respondents were matched to a sampling frame on gender, age, race, education, party identification, ideology, and political interest. The frame was constructed by stratified sampling from the full 2010 American Community Survey (ACS) sample, and matched on other variables to the November 2010 Current Population Survey, and 2007 Pew Religious Life Survey. Each set of matched cases were weighted to its sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame.
